AI/ML Engineer with 2+ years of combined industry and research experience, specializing in designing innovative applications, optimizing systems for scalability, and delivering secure, high-performance solutions. Skilled in building reliable, efficient software and driving continuous innovation and improvement. Experienced in leading dynamic cross-functional teams, collaborating with diverse stakeholders, and achieving measurable results in fast-paced, technology-driven environments.

EDUCATION

Master of Science in Computer Science - The University of Georgia (GPA: 3.55/4.0) Athens, GA (Jan '24 – May '26)
Courses: Deep Learning, Machine Learning, Data Structures & Algorithms, Software Engineering, Database Management.

Bachelors in Computer Science - Lovely Professional University (GPA: 7.8/10.0) India (Jun '19 – Jun '23)
Courses: Artificial Intelligence, Data Analytics, OOPS, Python, Java, Web Development, Computer Architecture, Operating Systems

WORK EXPERIENCE

Graduate Assistant | University of Georgia Nov 2024-Present

- Designed and deployed an **AI-powered chatbot** for the University of Georgia's **Textiles Department**, leveraging **Natural Language Processing (NLP)** and **Machine Learning techniques** to handle **500+ student queries monthly**, significantly improving accessibility and reducing faculty workload by **30%**.
- Collaborated with faculty and deployed the solution on Microsoft Azure**, ensuring **99.9% uptime** and secure, scalable access; aligned chatbot responses with academic requirements to deliver accurate, context-aware interactions for students.

Software Engineer | Capgemini Technology Services Mar 2023-Sep 2023

- Developed and maintained scalable enterprise web applications** using Java and Spring Boot, delivering robust backend services that improved overall system efficiency and reduced response time by 20%.
- Implemented dynamic, user-friendly, and responsive front-end features** with HTML, CSS, JavaScript, and Angular/React, significantly enhancing user engagement and boosting client satisfaction scores.
- Optimized application reliability** by conducting **unit testing, debugging, and performance tuning**, achieving **95%+ defect-free deployments** in production. **Managed relational databases with MySQL and PostgreSQL**, improving query performance and ensuring data integrity across applications with **100K+ records**.

Technology Intern | LPU School of Computer Science Engineering Jul 2022-Dec 2022

- Designed and developed a web portal** connecting hospitals, donors, and recipients to facilitate timely blood requests and deliveries, leveraging **MongoDB** for efficient data management and real-time tracking of local blood bank information.
- Built an interactive website using Visual Basic, HTML, JavaScript, and Angular**, enhancing user experience and ensuring seamless navigation.

SKILLS

Programming Languages: Python, C, C++, R, HTML, CSS, Data Structures, Algorithms, Java, TypeScript, Java, PHP, JavaScript.

Frameworks: PyTorch, Flask, Bootstrap, ES6, React JS, Angular JS, NodeJS, Spring Boot, OpenCV, UI/UX

Database and tools: MySQL, NoSQL, MongoDB, SQL, Microsoft SQLServer, GIT, Visual Studio,

Technologies and Software: Computer Vision, LLM's, AI, AWS, Microservice Architecture, SDLC, Github.

PROJECTS

KinterateAI, AI/ML

- Developed and fine-tuned an AI-powered chatbot** using Natural Language Processing (NLP) and Machine Learning models to deliver context-aware responses, improving student query resolution and reducing repetitive faculty workload by 30%.
- Engineered backend architecture with Python, Flask, and Azure Cloud**, integrating departmental datasets and deploying the solution with **99.9% uptime**, ensuring secure and scalable access for 500+ monthly student interactions.
- Implemented data preprocessing, intent classification, and entity recognition pipelines**, enhancing response accuracy and reliability by 25%, while collaborating with faculty to align outputs with academic standards.

Text Suggestive and Predictive System using N-gram Model, Machine Learning

- Built a predictive text Machine Learning model** using Python, NLTK Brown Corpus, and Flask to auto-complete user input, achieving **85%+ accuracy** in next-word prediction and enhancing typing efficiency.
- Developed a responsive web interface** with HTML, CSS, JavaScript, and AJAX for real-time input streaming to the backend, reducing response latency to **<150ms** and enabling seamless user interaction across 1,000+ test sessions.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Generative AI Professional
- Cloud Database Service Professional

ACHIEVEMENTS

- Awarded as Best Employee of the Month for outstanding performance and contributions to team success at Capgemini.
